EDUCATION

2010 - 2012

BLEKINGE INSTITUTE OF TECHNOLOGY

KARLSKRONA, SWEDEN

MSc Electrical Engineering
(Radio Communication)

TRAININGS

2/2020 - 5/2020

SOFTWARE DEVELOPMENT ACADEMY (KTH & NOVARE)

LUND, SWEDEN

System and Web Development

12/2018 - 5/2019

FOO CODING

MALMÖ, SWEDEN

Full Stack Web Development

PROFILE

As an experienced Full Stack Developer, I specialize in developing scalable web applications leveraging core technologies such as JavaScript, TypeScript, React.js, Node.js, Java, Git, and AWS. Known for problem-solving skills and collaborative approach, I thrive in cloud-based and agile environments. My expertise spans responsive UI development, API development, database integration, and CI/CD processes, enabling me to deliver innovative and effective software solutions that meet diverse client needs.

WORK EXPERIENCE

Freelance Web Developer (Remote)

4/2024 - PRESENT

- Developing responsive web applications using React and TypeScript for diverse client needs, ensuring cross-device compatibility.
- Implementing RESTful APIs with Node.js and Express for seamless backend integration, facilitating efficient data exchange.
- Enhancing website performance and SEO using Next.js and Tailwind CSS framework, optimizing load times and search engine visibility.
- Managing cloud deployments on AWS, ensuring scalability and reliability, and maintaining high availability and disaster recovery.
- Collaborating with clients to design and deliver custom software solutions, understanding their requirements, and translating them into functional applications.

Paramountric AB (Malmö)

11/2023 - 4/2024

Software Developer

- Built a Next.js collaboration platform, integrating real-time features such as live editing, chat, and instant messaging using TypeScript, React, and LiveBlocks, enhancing user interaction and communication.
- Collaborated on database integration, ensuring seamless data flow and reliability. Enhanced development workflows through the implementation of CI/CD pipelines using GitHub Actions, leading to faster and more efficient deployments.
- Optimized AWS cloud infrastructure to improve deployment efficiency and system resilience. This involved configuring services and automating processes to ensure high availability and performance.
- Developed robust authentication and authorization modules using Next Auth and Clerk APIs, ensuring high-level security standards. This included implementing comprehensive data protection measures and ensuring compliance with industry regulations.

LANGUAGES AND FRAMEWORKS

- HTML, CSS, Bootstrap, Tailwind
- JavaScript, TypeScript, React.js
- Node.js, Express, Next.js, Redux
- Java, Springboot, Dart, Flutter

DATABASES

- PostgreSQL, MySQL, MongoDB

CLOUD

- Amazon Web Services
- Google Cloud, Firebase
- Heroku, Netlify, Vercel

TOOLS

- Git, GitHub, GitLab
- NPM, Yarn, Gradle, Maven
- Jira, Miro, Slack, Trello
- VS Code, IntelliJ, Eclipse
- JEST, React Testing Library
- Prisma, Supabase, Convex
- Docker, OAuth, JWT
- Figma, Adobe XD, Canva

OTHER SKILLS

- Team Work
- Problem solving
- Communication
- Agile, Scrum
- Engineering, Math

LANGUAGES

- English (Advanced)
- Swedish (Intermediate)
- Danish (Basic)

WORK EXPERIENCE

Freelance Software Developer (Remote)

11/2022 - 11/2023

- Created and deployed React and Next.js applications focusing on optimizing both server-side and client-side rendering to maximize performance and enhance user experience. This involved leveraging techniques to ensure fast load times and smooth interactions.
- Implemented state management strategies using React Hooks and queries, Context API, middleware, and Redux to efficiently manage complex data flows and UI states. This allowed for more maintainable and scalable code, improving overall application performance.
- Utilized Firestore for scalable database solutions, providing robust data handling capabilities. Managed Google Cloud Storage for efficient image and data storage, ensuring high availability and disaster recovery capabilities. This ensured that applications remained resilient and data was consistently accessible, during disruptions.

PaperTale Technology AB (Malmö)

2/2021 - 9/2022

Software Engineer

- Engineered responsive user interfaces using React, optimizing them for various devices and browsers to enhance user experience.
- Developed and maintained scalable Rest APIs using Node.js and Express, facilitating seamless data interchange between frontend and backend systems, efficient queries, mutations, and optimization.
- Administered AWS using Docker containers, orchestrating services to ensure efficient load balancing and minimal downtime. This included setting up and managing containerized applications, automating deployments, and monitoring system performance.
- Conducted manual, A/B, unit, integration and end-to-end testing ensuring robust application performance and identifying areas for improvement. This involved writing comprehensive test cases, analyzing test results, and implementing necessary optimizations

Outso AB (Malmö)

6/2014 - 9/2019

Engineer Technical Support and Web Admin

- Developed and maintained WordPress and Shopify platforms, implementing features that enhanced shopping experiences and streamlined checkout processes. This included customizing themes, integrating plugins, and optimizing site performance.
- Integrated and managed Stripe for secure online transactions configuring payment gateways, ensuring PCI compliance.
- Managed domain registration, email setup, and web hosting, ensuring optimal site performance, reliability, DNS configuration, email server setup, and monitoring server uptime and performance.
- Coordinated with suppliers, managed inventory, and facilitated logistics to support smooth business operations and timely delivery of services. Tracking inventory levels, and order fulfillment.
